## Protective Cover For Fluorescent Tube

### Economical and Fully Reusable

CoverShield clear tube protectors are a British made product used for the protection against glass fragments from fluorescent lamps breaking. This providing a simple, cost effective solution to guard against food contamination and offers protection against accidental breakage and injury within the workplace offices, Schools, catering establishments and hospitals.

### Manufactured in a high quality clear polycarbonate material

The protector cover slips over the fluorescent lamp in seconds and is sealed with non-toxic, silicone end-caps, ensuring all glass and toxic compounds are safely contained within the unit. The protectors sleeve are fully reusable making them cost effective.

### Technical Data

A fluorescent tube protectors are available in a range of T5, T8 and T12 sizes. Ultra violet light emissions are controlled to 390-400nm.

The transmission of light is unequalled at 94% of total output.

### Complies with Farm Quality Assurance Safety Regulations

Safety and hygiene in the agricultural industry has become a major issue, particularly where lighting is exposed. Our tube protectors are recommended to meet agricultural quality assurance guidelines to protect light in sensitive areas and satisfy farm assurance inspections.
